

Content

This article details the storage requirements for standalone and file server systems using GIFTS Plus Pack, a .NET extension of GIFTS. Prior to receiving and installing GIFTS Plus Pack, please review the following summary of storage requirements to ensure that your system is ready to install GIFTS Plus Pack.

NOTE: All other technical considerations, such as configuration requirements, GIFTS compatibility, and certified and supported products, are determined by your version of GIFTS. Please refer to PowerME, the MicroEdge client portal, for this information.

Storage Requirements

The following table details the approximate amount of disk space needed for the components of GIFTS Plus Pack and the location of each component:

Component	Location	Requirements
GIFTS Plus Pack Program Files	The GIFTS directory (located on your GIFTS file server or, on standalone systems, the local hard drive)	180 MB
Windows .NET Framework 2.0 Files	Each GIFTS workstation	100 MB
GIFTS Link Plus Files	Each GIFTS workstation	10 MB

Note: On file server and client/server systems, the GIFTS and GIFTS Plus Pack executable files are installed in the GIFTS directory and most often remain there. In some cases, your system administrator may decide to locate the program files on the hard drive of each workstation to improve performance.

Therefore, the overall disk space requirements for the GIFTS Plus Pack are as follows:

File server and client/server installations: You need 180MB of disk space on your file server to install GIFTS Plus Pack, and 110 MB on each workstation.

Standalone installations: You need 290 MB of disk space on a GIFTS standalone machine to install GIFTS Plus Pack.
